Project Name	**Skill and Job Recommender**

Customer Problem Statement:-

Goal:

A job search has to be very intuitive for the students so that they can find job suiting their skills, positions, industry, role and location by company name.

1) The Skill and Job recommender application is an example of a search where documents are bulky because of the content in candidate resumes.

2) The search provides over the candidate database is required to have huge set of fields to search.

3) Helps you focus on what matters to create experiences people will love.

4) Find a job/skill that corresponds to what the person knows.

PROBLEM:-

The current problem recruitment is done manually, most available jobs in Nigeria can only be applied at the agency can be done for which the job seekers have to go to the agency and check the available jobs there.

SOLUTION:-

"The purpose of job oriented application is to help both the job seekers and recruiters find the right organization or the employee."
